LETTER OF INTENT

Strategic Robot Deployment Partnership

This Letter of Intent ("LOI") is entered into as of **[Date]** by and between:

StarForge Robotics LLC, having its principal business address at WeWork Brickell City Centre, 78 SW 7th Street, Miami, FL 33130, United States ("StarForge");

and

[Deployment Partner Legal Name], having its registered office at [Address] ("Deployment Partner").

StarForge and Deployment Partner are each a "Party" and collectively the "Parties."

1. Purpose

The purpose of this LOI is to record the Parties' intention to establish a strategic partnership for the deployment and commercialization of StarForge humanoid robots and cloud-based Robot Applications.

Under the contemplated partnership:

- StarForge provides robotic hardware, cloud-based robot intelligence, platform infrastructure, and related technology.
- Deployment Partner identifies customers, manages deployments, develops customer-specific integrations, and commercializes robotic solutions in selected industries.
- Skill Partners collect task-specific physical-world data used to create Robot Applications for particular use cases.

The Parties may collaborate across warehouses, manufacturing, hospitality, construction, homes, logistics, and other physical-work environments mutually agreed between them.

2. StarForge Technology Framework

StarForge develops general-purpose humanoid robots based on a cloud-edge intelligence architecture.

2.1 Cloud Robot Applications

Cloud-hosted Robot Applications may perform functions including:

- visual understanding;
- reasoning and planning;
- long-term memory;
- domain-specific intelligence;
- workflow coordination;
- enterprise-software interaction;
- task-level decision-making; and
- other computationally intensive functions.

These Robot Applications may be developed from physical skill data collected through StarForge's Skill-to-Action protocol, including data captured using sensor-enabled gloves, egocentric or stereo glasses, and other approved data-collection systems.

2.2 Edge Intelligence

The robot's local intelligence handles latency-sensitive functions including:

- inverse kinematics;
- actuator control;
- sensor processing;
- motion correction;
- tactile and force response;
- safety systems;
- tamper detection; and
- other real-time functions.

This separation allows StarForge robots to become progressively more capable through improvements to cloud models without requiring corresponding upgrades to the computing hardware installed inside each robot.

3. Robot Deployment

Subject to execution of definitive agreements, StarForge intends to make Buildo humanoid robots available to Deployment Partner for customer deployments.

Unless otherwise agreed in writing, StarForge will retain legal ownership of robots supplied under a rental or Robotics-as-a-Service model.

Deployment Partner will manage customer-facing deployment activities agreed between the Parties.

Where mutually agreed, deployed robots may be presented as a co-branded product incorporating both the Deployment Partner and StarForge brands.

The form and use of any co-branding shall require mutual approval.

4. Commercial Deployment Model

StarForge may provide robots to Deployment Partner under preferential deployment-partner commercial terms.

Exact terms relating to robot rental, deployment quantities, payment terms, deposits, hardware servicing, maintenance, insurance, and other commercial matters will be specified in definitive agreements or deployment orders.

No pricing commitment is created by this LOI unless expressly stated otherwise.

5. Deployment Partner Responsibilities

Deployment Partner is expected to perform functions including:

- managing customer relationships;
- determining customer-specific robotic use cases;
- helping define workflows that should be automated;
- coordinating deployment requirements;
- developing or arranging customer-specific software integrations;
- connecting Robot Applications with enterprise software and operational systems;
- assisting with onsite rollout and adoption; and
- expanding successful deployments across additional sites or customers.

Specific responsibilities may vary by deployment and will be documented in definitive agreements or statements of work.

6. StarForge Responsibilities

StarForge is expected to provide:

- Buildo humanoid robots;
- robot hardware and firmware;
- cloud-based robot intelligence infrastructure;
- edge intelligence and robot-control software;
- APIs and supported integration interfaces;
- compatible Robot Applications;
- inference and cloud infrastructure;
- robot telemetry and fleet-management functionality where applicable; and
- reasonable technical support required for deployment.

Applicable service levels, warranties, maintenance requirements, and support obligations will be agreed separately.

7. Skill Partners and Robot Applications

Certain robotic capabilities depend upon task-specific physical skill data.

StarForge may work with specialized data-collection and application-development partners ("Skill Partners") that collect demonstrations using StarForge-approved equipment and protocols.

For example, where Deployment Partner wishes to deploy robots within a warehouse, a Skill Partner may collect demonstrations from experienced warehouse workers performing tasks such as picking, packing, sorting, shelf replenishment, material movement, inventory handling, and other applicable workflows.

Such Skill Data may be used to create or improve a Warehouse Robot Application deployable across compatible StarForge robots.

Equivalent Robot Applications may be created for domains including homes, hospitality, manufacturing, construction, logistics, retail, healthcare, agriculture, and other physical-work environments.

8. Recurring Inference Business Model

Cloud-based Robot Applications are intended to generate recurring usage-based revenue.

When a deployed robot uses a Robot Application, it may consume cloud inference or other metered intelligence services.

For Robot Applications deployed through Deployment Partner under this partnership, the Parties presently intend that applicable attributable Robot Application inference revenue be shared as follows:

70% - applicable Skill Partner(s) and/or Robot Application developer(s)

30% - Deployment Partner

The definitive agreement will establish the precise definition of attributable revenue and address matters including permitted deductions, attribution, reporting, payment timing, multiple Skill Partners, derivative applications, and continuing revenue rights.

For clarity, the proposed revenue share applies to applicable Robot Application inference revenue and does not automatically apply to hardware sales, robot rental revenue, maintenance charges, or other unrelated revenue.

9. Deployment Partner Revenue Rights

Where a customer introduced or managed by Deployment Partner uses qualifying Robot Applications through StarForge robots, Deployment Partner will be entitled to the applicable revenue share defined in the definitive commercial agreement.

The definitive agreement will also specify how such rights apply to customer renewals, expanded robot fleets, additional deployment locations, successor Robot Applications, customer transfers, and post-termination deployments.

10. Customer Relationships

Customers introduced by Deployment Partner will remain Deployment Partner-managed relationships for purposes of the contemplated partnership, subject to the definitive agreement.

The Parties intend to cooperate in good faith and avoid circumvention of customer relationships originated by the other Party.

Definitive agreements may establish provisions governing customer attribution, account ownership, non-circumvention, renewals, cross-selling, expansion deployments, and direct customer communications.

11. Software and Enterprise Integration

StarForge intends to provide APIs that allow Deployment Partner and approved developers to build applications and integrations on top of StarForge cloud robot models.

Robot deployments may connect to systems including Warehouse Management Systems (WMS), Enterprise Resource Planning (ERP) systems, Manufacturing Execution Systems (MES), inventory systems, property-management systems, workflow platforms, digital twins, AI agents, customer databases, and other enterprise software.

Integrations may be implemented through APIs, structured software-description interfaces, direct computer-use capabilities, or other interfaces supported by StarForge.

The objective is to allow robots to perform not only physical actions but also the corresponding digital workflows associated with those actions.

12. Intellectual Property

Each Party retains ownership of intellectual property owned or independently developed by it.

StarForge retains ownership of its existing and future humanoid robot designs, robotic hardware, actuators, firmware, cloud infrastructure, AI models, Robot Applications developed by StarForge, Skill-to-Action technology, training infrastructure, data-collection technology, APIs, patents and patent applications, and related proprietary technology.

Deployment Partner retains ownership of its independently developed software, integrations, workflows, customer-facing technology, proprietary applications, and other intellectual property.

Ownership and licensing of any jointly developed technology will be addressed separately in writing.

13. Data

Rights concerning data generated through the partnership, including customer operational data, robot telemetry, Skill Data, training data, application data, integration data, model outputs, and derived information will be specified in definitive agreements.

Neither Party acquires ownership of the other Party's pre-existing data or technology merely by participating in the partnership.

14. Deployment Territory and Industries

The Parties may jointly identify particular countries, regions, industries, customer categories, deployment environments, or use cases for collaboration.

Unless expressly granted in a definitive agreement, Deployment Partner will not receive exclusivity over any territory, customer category, Skill Domain, or industry.

15. Term

The Parties presently contemplate an initial commercial partnership term of at least two (2) years beginning upon execution of the definitive commercial agreement or another mutually agreed commencement date.

The partnership may subsequently be renewed or extended by mutual agreement.

16. Definitive Agreements

Before commercial deployment, the Parties expect to execute one or more definitive agreements covering matters including robot rental terms, deployment responsibilities, maintenance, repairs, insurance, customer ownership, application inference revenue sharing, revenue attribution, reporting and payments, APIs and software integration, service levels, data rights, intellectual property, warranties, indemnification, liability limitations, confidentiality, compliance, termination, and post-termination rights.

Specific deployments may additionally be governed by Statements of Work or deployment orders.

17. Confidentiality

Each Party may receive confidential information relating to the other Party's technology, business, customers, pricing, AI models, software, datasets, deployment plans, hardware, and commercial strategy.

Each Party shall use commercially reasonable safeguards to protect such information and shall use it solely for evaluating and implementing the contemplated partnership.

Confidential Information may be disclosed only to personnel, affiliates, contractors, or professional advisers having a legitimate need to know and subject to suitable confidentiality obligations.

Where the Parties have entered into a separate NDA, that NDA will continue to apply.

18. Public Announcements and Branding

Neither Party may issue a public announcement regarding the partnership or use the other Party's name, trademark, logo, or brand assets without prior written authorization.

The Parties may mutually approve co-branded marketing, customer case studies, public announcements, or other promotional activities following execution of definitive agreements.

19. Costs

Unless otherwise agreed, each Party will bear its own costs associated with evaluating, negotiating, and establishing the contemplated partnership.

Deployment-specific costs will be governed by the applicable definitive agreement.

20. Non-Exclusivity

Unless otherwise agreed in writing, the contemplated partnership will be non-exclusive.

StarForge may work with other deployment partners, Skill Partners, developers, and customers.

Deployment Partner may work with other technology providers, subject to confidentiality and intellectual-property obligations.

21. Non-Binding Nature

Except for provisions expressly identified as binding, including Confidentiality, Public Announcements, Costs, Governing Law, and this Non-Binding Nature provision, this LOI represents the Parties' present intentions only.

It does not obligate either Party to enter into a definitive commercial agreement, deploy any minimum number of robots, provide any minimum quantity of robots, achieve any minimum revenue, make any minimum investment, or complete any contemplated transaction.

Binding commercial obligations will arise only after definitive agreements are executed by authorized representatives of both Parties.

22. Governing Law

The binding provisions of this LOI shall be governed by the laws of [State / Jurisdiction], without regard to its conflict-of-laws principles.

The definitive agreement may specify an alternative governing law or dispute-resolution mechanism mutually agreed between the Parties.

23. Acceptance

If this LOI accurately reflects the Parties' current understanding regarding the contemplated strategic deployment partnership, the Parties may indicate their intention to proceed by signing below.
